Question 1 :

Rat in a Maze

You are given a starting position for a rat which maze can be thought of as a 2-dimensional plan square matrix of order $N * N$ where the cells locations while value 1 is the open/available pat The rat's destination is at $(N - 1, N - 1)$.

Your task is to find all the possible paths the destination in the maze.

The possible directions that it can take to move i.e. $(x, y + 1)$, 'L' (left) i.e. $(x - 1, y)$, 'R' (right) i.e. $(x +$

(This problem is similar to Grid ways.)
